

1. Typed Powerpoint in Start and Pressed Enter

2 It doesn't Launch PPT instead takes me to Browser as if it wants me to install PPT. I had already installed o365 on my Laptop from the login earlier . So why its not detecting the earlier installed version and everytime I have to do this while opening PPT ?

3) Tried with the second suggestion too , selected Property for the PPT doc and change it to point to Open with PowerPoint Always. But still it doesn't open the file.
