

When connecting I immediately get success:

Nexpose	Microsoft Azure	Connected	
---------	-----------------	-----------	--

Minutes later I'm getting this:

Nexpose	Microsoft Azure	Error Reconfigure	
---------	-----------------	-----------------------------------	--

When I click on the connection I get the reason for the error:

Failed to get configuration: [object Object]. Failed to get integration connection types: Forbidden. Failed to get consumption settings: [object Object]

When clicking on the reconfigure selection, this is the message:

Failed to reach out to the Azure service, will try again.

Access Policies on the Azure side:

Nexpose | Access policies

Key vault

Security

Enable Access to:

☒ Azure Virtual Machines for deployment

☒ Azure Resource Manager for template deployment

☐ Azure Disk Encryption for volume encryption

Permission model

☒ Vault access policy

☐ Azure role-based access control

+ Add Access Policy

Current Access Policies

Name	Email	Key Permissions	Secret Permissions	Certificate Permissions	Action
APPLICATION					
Nexpose		9 selected	7 selected	15 selected	Delete

The deployment was successful so I'm not sure why there's errors:
