

SAML 2.0 configuration

Azure AD B2B can be configured to federate with IdPs that use the SAML protocol with specific requirements listed below. For more information about setting up a trust between your SAML IdP and Azure AD, see [Use a SAML 2.0 Identity Provider \(IdP\) for Single Sign-On](#).

ⓘ Note

The target domain for SAML/WS-Fed IdP federation must not be DNS-verified in Azure AD. See the [Frequently asked questions](#) section for details.
