How to Import Data into a Newly Created Database in SQL Server

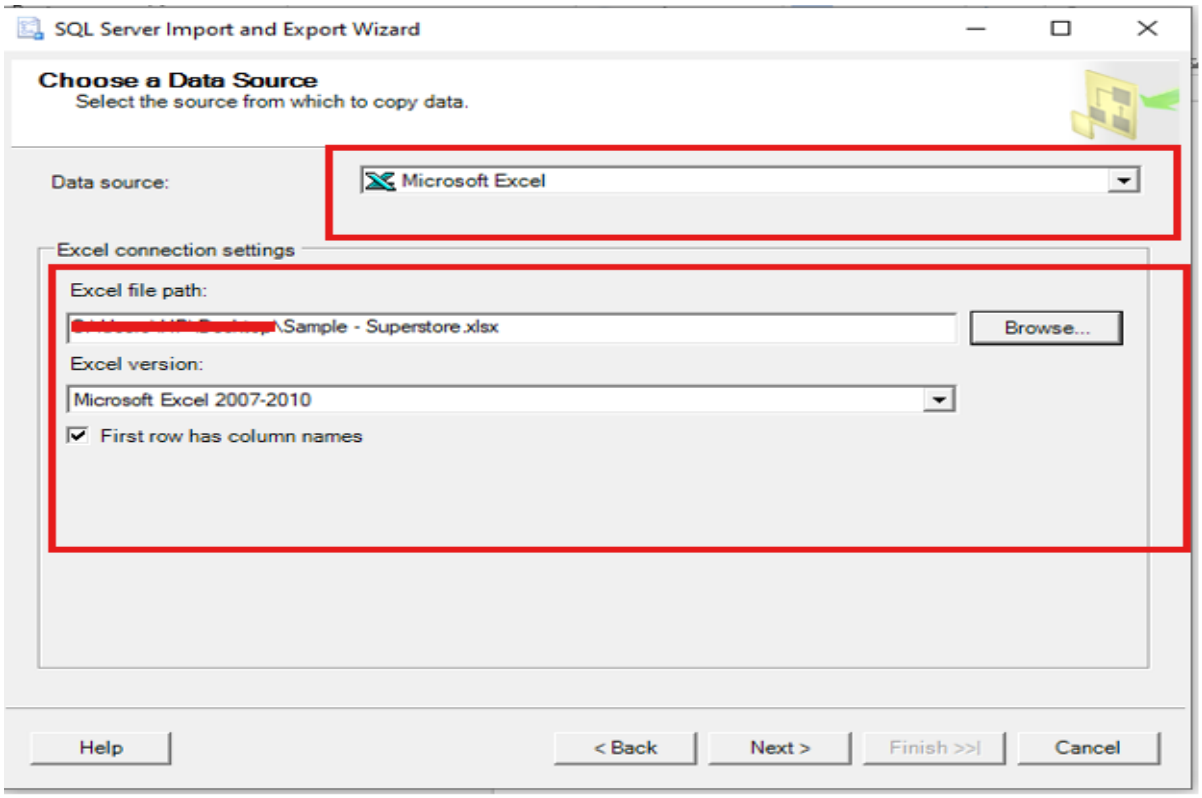

Step 1:

Create a new database, then right-click on the database name.

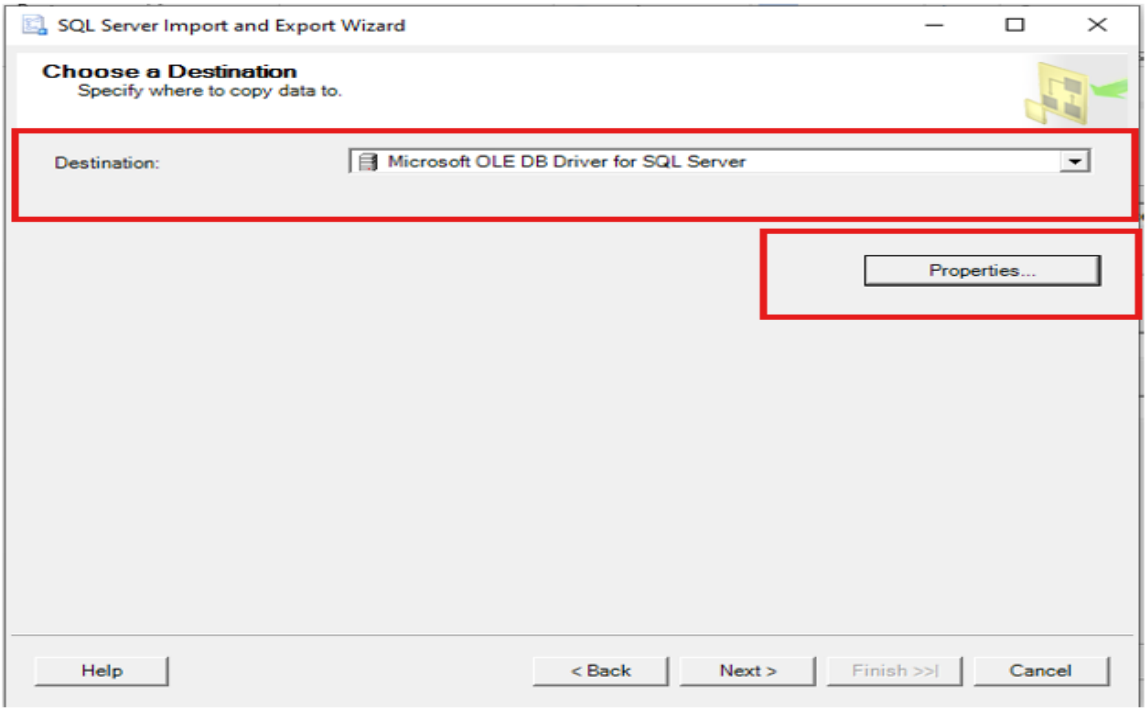

Select Tasks, and under Tasks, choose Import Data.

Step 2: Chose the data source

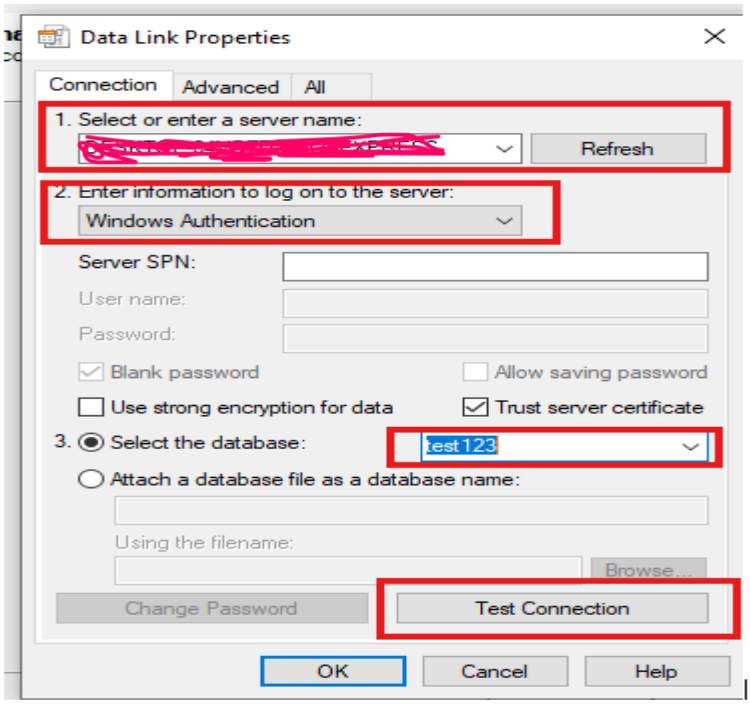

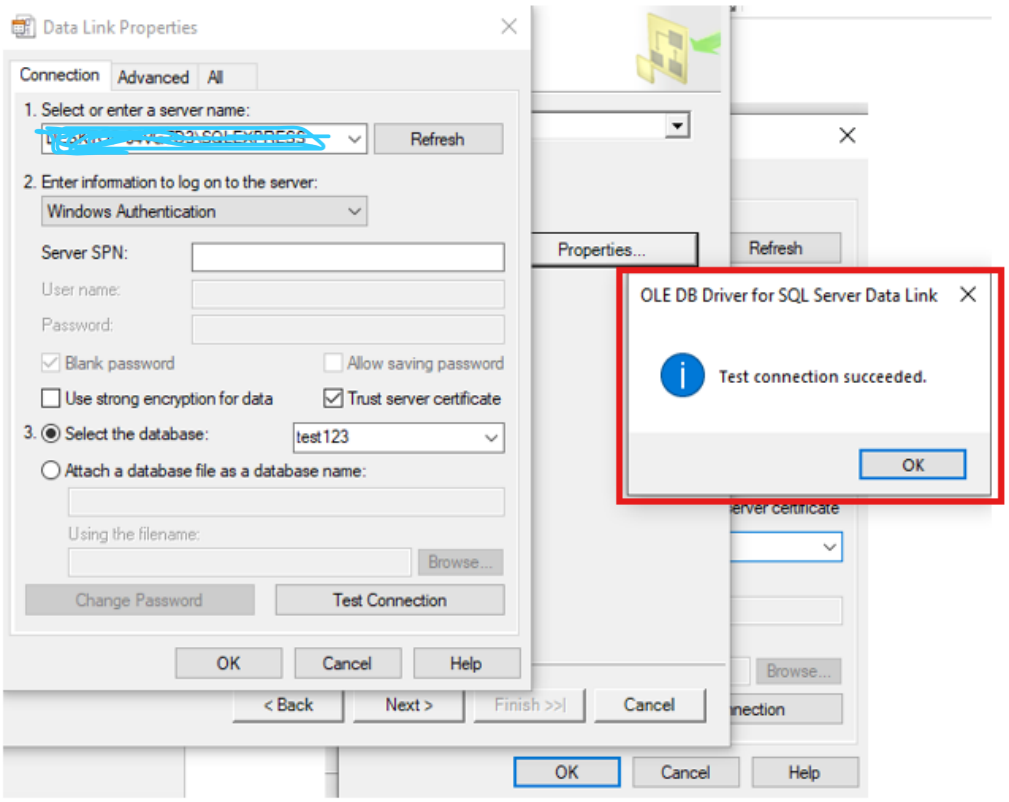

Step 3: Choose the destination

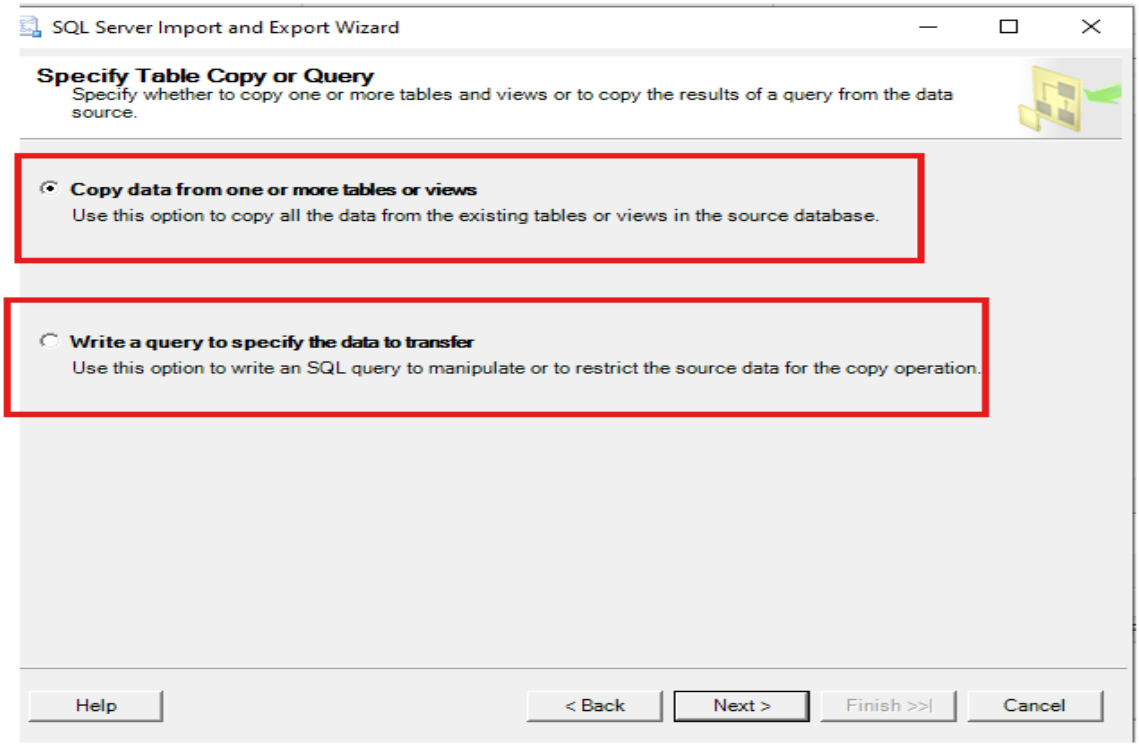

Step 4:

Click on Properties, then select the Server Name and Authentication Type. After that, choose the database where you want to load the data.

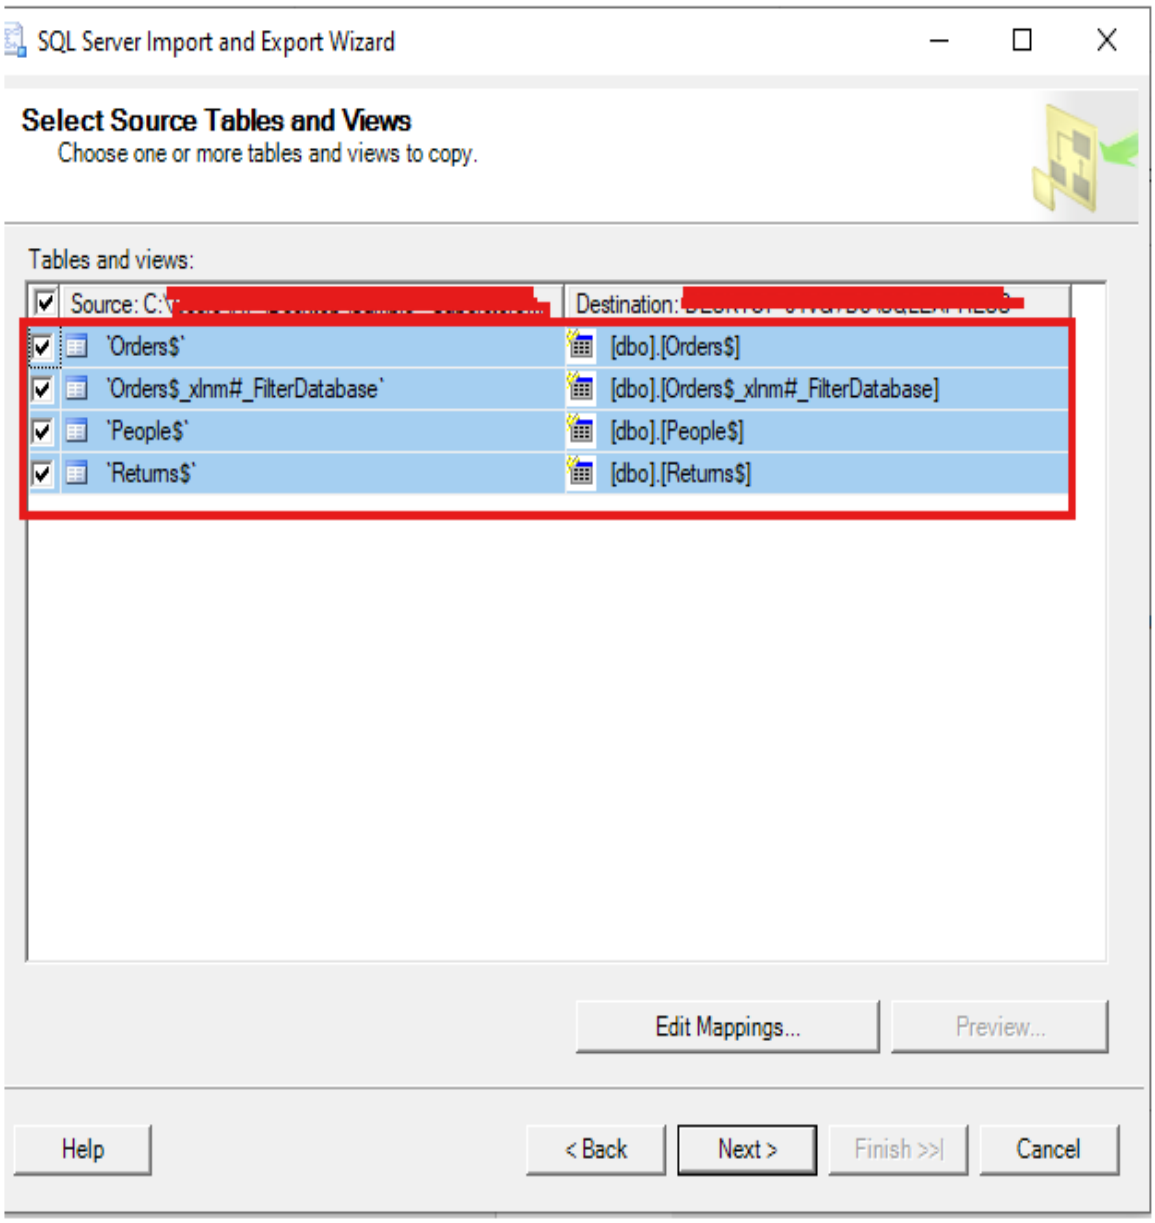

Step6: Select the copy type

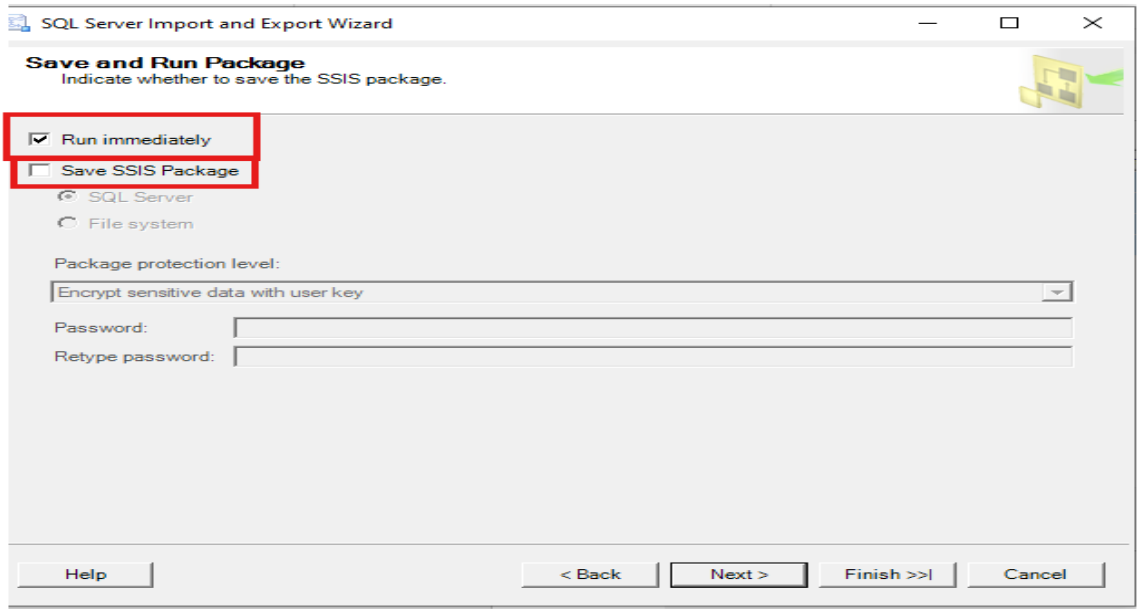

Step 7:

Select the tables from the source that need to be loaded.

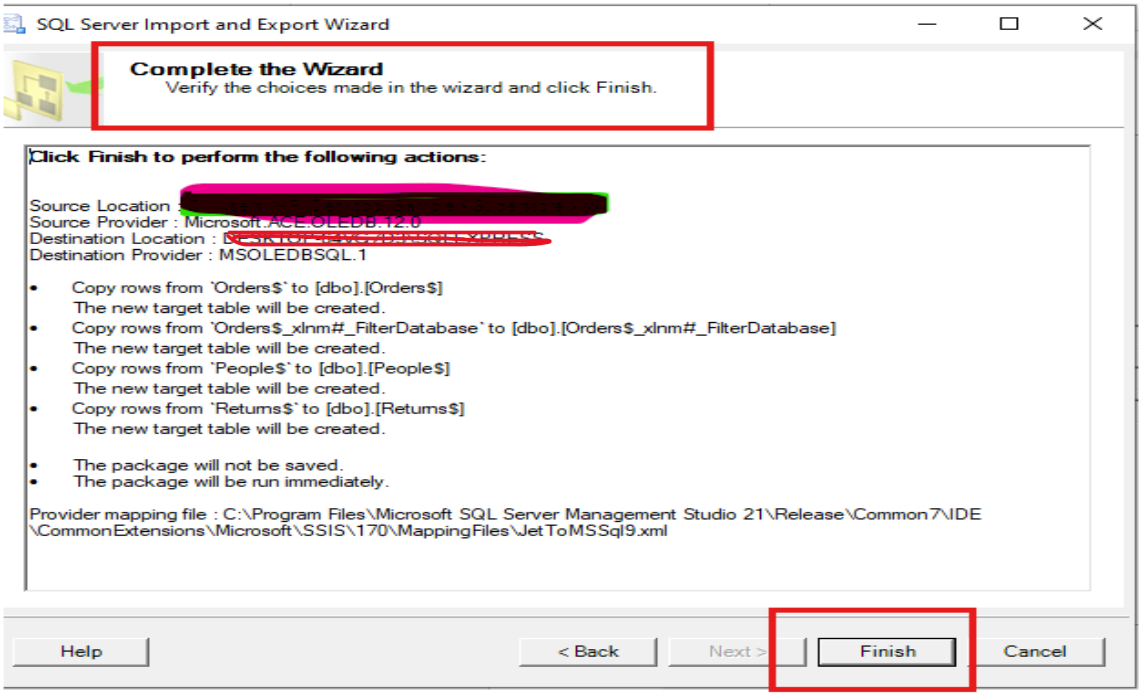

Step 8:

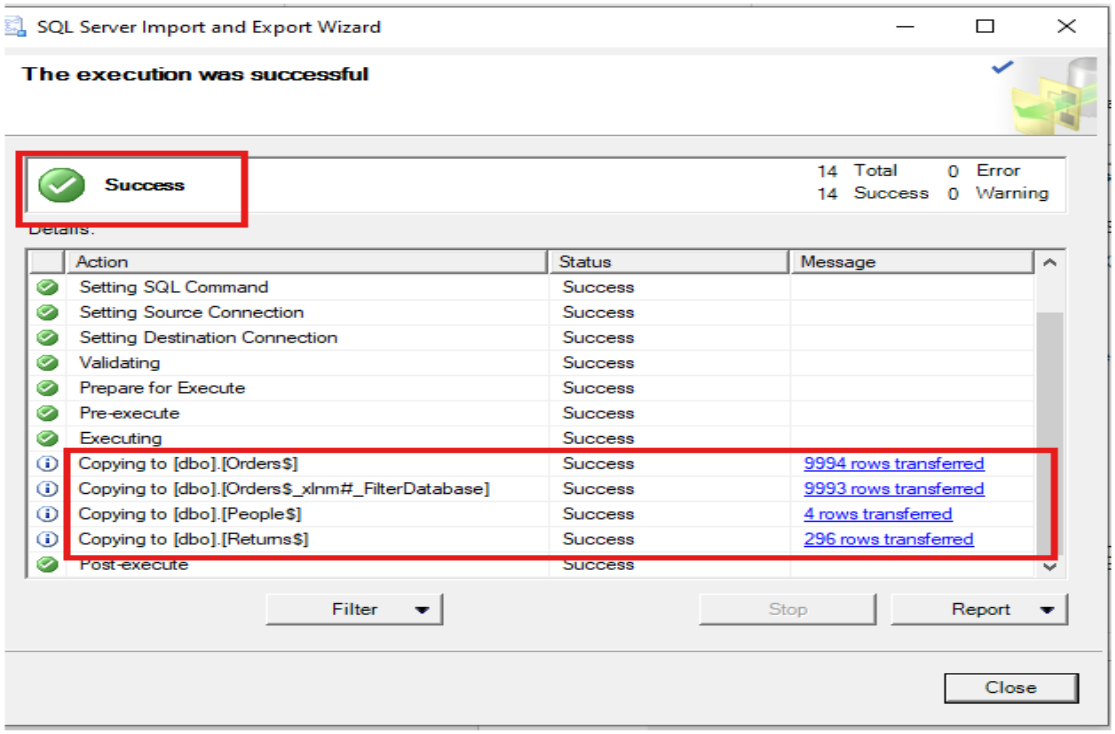

Select the Run As type as shown in the screenshot, and then click Next.

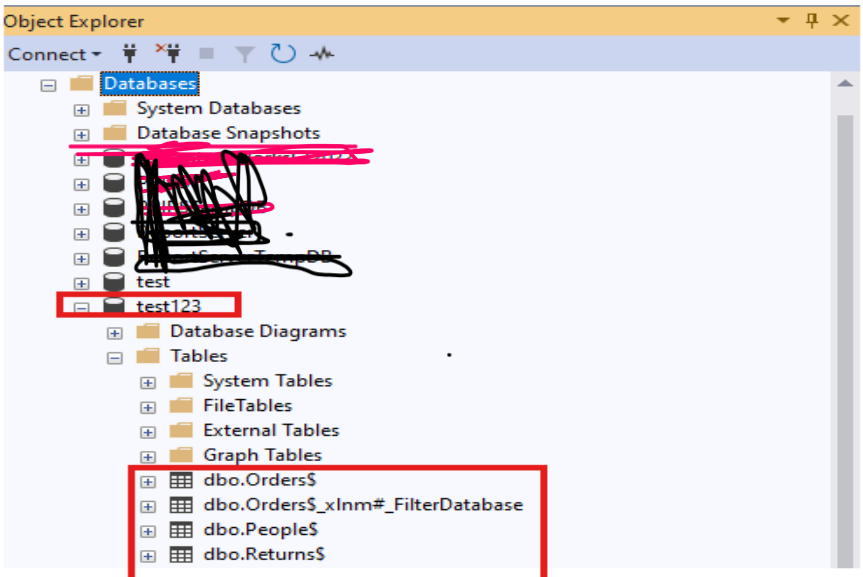

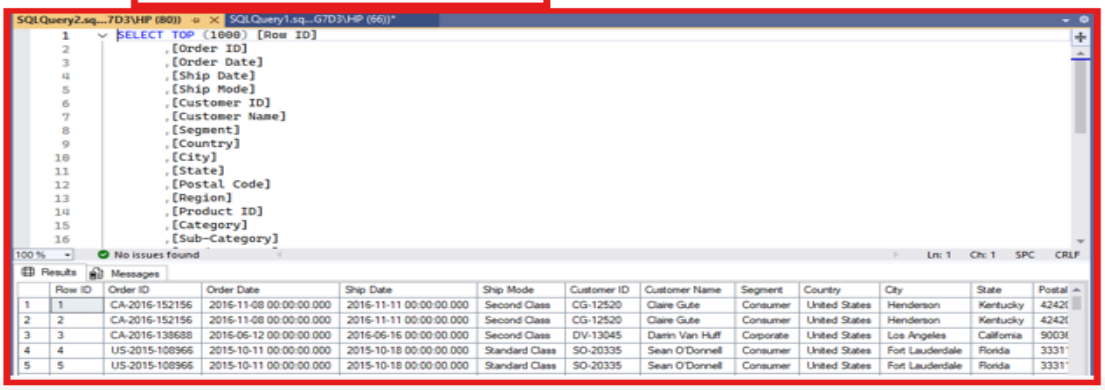

Step9: Click on Finish

Once the execution is successful, as shown in the screenshot below, log in to SQL Server and refresh the database you created to import the data. You should now be able to see all the tables inside the database. For testing, you can run queries on the data to validate it
