

Computer\HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\CCM\ExternalEventAgent\Criteria\Differentiation

	Name	Type	Data
	ab (Default)	REG_SZ	(value not set)

The screenshot shows the Windows Registry Editor interface. The left pane displays a tree view of registry keys under 'Computer\HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\CCM\ExternalEventAgent\Criteria\Differentiation'. The right pane shows a table with four columns: Name, Type, and Data. The 'Name' column lists registry keys, and the 'Type' column shows they are all of type REG_SZ. The 'Data' column indicates that the value is not set for most keys. Three specific keys under 'Differentiation' are highlighted with red circles and numbered 1, 2, and 3: 'ATPHealthStatusStateMessage', 'ComputerStatusStateMessage', and 'InfectionStatusStateMessage'. The 'Differentiation' key itself is also highlighted with a red circle.
