

Entra Custom CSS

Classes that don't work and doesn't override certain attributes

.ext-boilerplate-text - doesn't continue to the subsequent page to confirm sustained sign in so the colour doesn't persist

.ext-input.ext-text-box – I am trying to update the colour of the placeholder to white because its base is some blue

```
.ext-input.ext-text-box
{
  /* Styles for text boxes */
  color: white !important;
}
.ext-input.ext-text-box::placeholder
{
  /* Styles for text boxes */
  color: white !important;
}
```

.promoted-fed-cred-content – can this be allowed to be changed? Because right now the class in the template (ext-promoted-fed-cred-box) isn't the right place to be able to change the background colour of the sign in buttons

.identityBanner – Is there an acceptable class I can make changes to this so that the area that displays the email of the user that is logging in to have specific styling like background colour and text color?

```
.identityBanner {  
  color: #fff;  
}
```

.text-title – Is there an acceptable class I can make changes to the “Stay Signed in?” header title to have a different text color?
