The screenshot shows the Visual Studio Code interface with the Extensions view open. The left sidebar displays the 'EXTENSIONS' panel with a search bar and a list of installed and available extensions. The 'INSTALLED' section shows the 'MySQL extension for Azure Data Studio' by Microsoft. The 'MARKETPLACE' section lists other extensions like 'Admin Pack for SQL Server', 'Azure Arc', 'Azure CLI', 'Azure SQL Migration', 'Central Management Servers', 'Data Virtualization', and 'Database Administration Tool Extension'. The main panel shows the details for the 'MySQL' extension (v1.0.0) by Microsoft. It includes a description, a list of features, and a 'More Info' section with release and update dates. A notification at the bottom right states: 'Extension host terminated unexpectedly 3 time minutes.' with buttons to 'Start Extension Bisect' and 'Restart Extension'.

MySQL extension for Azure Data Studio (preview)

Connect to, query, and manage MySQL databases with Azure Data Studio, a modern data editor available for Linux, MacOS, and Windows. This extension (preview) enables you to interact with MySQL using Azure Data Studio features like:

- Connect to MySQL anywhere (on-premises, or VMs, on managed MySQL in other clouds or on Azure Database for MySQL - Flexible Server)
- Searchable object explorer view for database objects, with auto-completion
- Query authoring and editing with Intellisense, syntax highlighting and code snippets
- View query results and save to csv, JSON, xml, or Excel
- Integrated terminal for Bash, PowerShell, and cmd.exe
